Account Overview

Scope for This Quarter: Meeting Rooms & Visitor Management Performance

Deployment Footprint

Country	Office	Users	Rooms	Live Since
India	Bengaluru (HQ)	700	100	Q1 2023
India	Pune	400	60	Q1 2023
USA	New York	500	70	Q2 2023
USA	Austin	250	40	Q4 2024
UK	London	150	30	Q4 2024
Total	**5 offices**	**2,000**	**300**	**—**

Review Period & Data Sources

Review Period: July 1 – September 30, 2026 (Q3 FY26).

This review draws on four data sets: (1) room-booking and calendar logs from all 300 rooms, (2) visitor kiosk and front-desk check-in logs across all 5 offices, (3) IT helpdesk tickets tagged ‘meeting rooms’ or ‘visitor management’, and (4) structured interviews with the office admin at each location. Austin and London — the two most recently onboarded offices — receive additional scrutiny given their shorter time on the platform.

How We Approached This Review

1 Reviewed the Data

Analyzed utilization, booking, and check-in data across all 5 offices for the full quarter, benchmarked week over week.

2 Segmented by Solution

Split analysis into Meeting Rooms and Visitor Management, since each is driven by a different operational workflow and owner.

3 Benchmarked Against Targets

Compared observed metrics — utilization, no-show rate, check-in time — against WorkInSync’s standard performance targets.

4 Prioritized by Impact

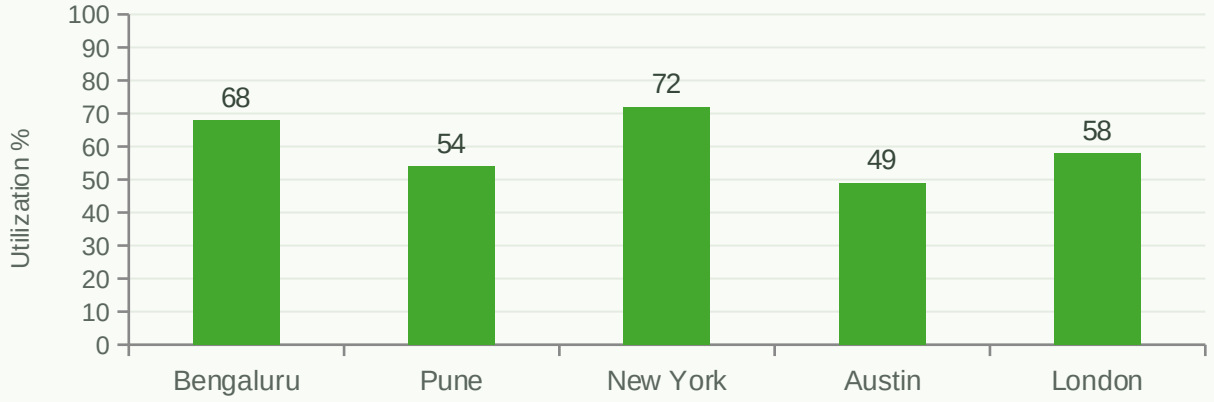

Ranked issues by operational impact and ease of remediation, so Slide 5 and 6 focus effort where it moves the needle fastest.

i 2,000 users · 300 meeting rooms · 5 offices · 3 countries — this review synthesizes performance across the full account footprint and sets the baseline for next quarter's targets.

Meeting Room Performance

Utilization, bookings, and room-size fit across 300 rooms — Q3 2026

Utilization by Office

Office-Level Detail

Office	Bookings	Util. %	No-show %	Size Mismatch
Bengaluru	3,850	68%	15%	29%
Pune	2,100	54%	21%	38%
New York	2,950	72%	12%	25%
Austin	1,400	49%	24%	41%
London	980	58%	19%	33%

Key Metrics

61%

Average utilization (target: 75%) — Austin and Pune trail the account average by 12–17 points.

18%

No-show rate — rooms held via calendar invite but never occupied, most common on Mondays and Fridays.

34%

Bookings mismatched to room size — 8–10 seat rooms used for 2–3 person syncs, while 2–4 seat rooms run at 89%.

85%+

Peak-hour (10 AM–1 PM) utilization vs. under 20% before 9 AM and after 4 PM — capacity exists but is poorly distributed.

i Net effect: an estimated 110 rooms/day sit idle despite booking conflicts elsewhere in the same office — roughly 33,000+ idle room-hours this quarter alone.

Visitor Management Performance

Throughput, compliance, and experience — ~4,200 visitors hosted in Q3 2026

Volume & Experience

47%

Pre-registration rate (target: 70%+) — most visitors still check in as walk-ins, slowing the front desk during the 9–10 AM rush.

6.5 min

Average check-in time (target: under 2 min) — driven by manual host approval and paper logging where kiosks aren't live.

4,200

Visitors hosted this quarter, up 12% QoQ — 68% of total traffic is concentrated in Bengaluru and New York.

3 of 5

Offices with self-service kiosks live — Pune and London still rely on manual desk check-in for every visitor.

Where the Friction Is

Integration & Connectivity

Calendar/host-notification sync is failing in Austin and London due to an SSO and access-control mismatch from last quarter's identity-provider migration. Impact: hosts aren't notified in real time, adding 3–4 minutes per visit.

Compliance & Data Privacy

London's visitor data (photos, ID scans) is retained beyond the GDPR-mandated window because auto-purge rules were never configured for that instance. Impact: exposes the account to regulatory risk on any audit or DSAR request.

User Experience

Manual host approval adds a 4-minute average wait, and Pune/London lack kiosks entirely. Impact: visitor satisfaction in these two offices runs 22% below the account average.

i Integration and compliance gaps are concentrated in Austin and London — the two most recently onboarded offices (live since Q4 2024) — rather than systemic across the account.

Insights & Key Problems

Root causes behind this quarter's performance gaps, and who they affect

Meeting Rooms

1 Inefficient Allocation

Large 8–10 seat rooms are routinely booked for 2–3 person syncs, while small 2–4 seat rooms run at 89% utilization with no buffer for overflow. Impact: teams can't find a small room even when large rooms sit empty.

2 No-show Culture

18% of bookings are held via calendar invite but never occupied — worst on Mondays and Fridays. Impact: an estimated 33,000+ idle room-hours this quarter that other teams could have used.

3 Uneven Utilization

Austin (49%) and Pune (54%) trail New York (72%) and Bengaluru (68%) by 12–23 points. Impact: capacity planning at the account level looks healthy on average, masking real local shortages and surpluses.

Visitor Management

1 Integration Gaps

Calendar/access-control sync is broken in Austin and London following last quarter's identity-provider migration. Impact: hosts miss real-time arrival notifications, adding 3–4 minutes to every visit.

2 Compliance Risk

London retains visitor photos and ID scans beyond the GDPR-mandated window because auto-purge was never configured for that instance. Impact: regulatory exposure on any audit or data-subject request.

3 Experience Friction

Manual host approval adds a 4-minute average wait, and Pune/London have no self-service kiosk. Impact: visitor satisfaction in those two offices runs 22% below the account average.

i Together, these patterns point to the same root cause: booking and check-in workflows aren't adapting to real usage — driving idle room capacity in older offices and integration/compliance friction in the newer ones.

Recommendations

What we propose to fix, and the outcome each change is expected to drive

Meeting Rooms

High priority · 2 weeks

✓ Enable an auto-release policy (5–10 min grace period) so no-show rooms free themselves automatically for other teams to book. Expected outcome: no-show rate falls from 18% toward the 8% target within one quarter.

Medium priority · 6 weeks

✓ Introduce smart room-size suggestions at the point of booking, nudging organizers toward a right-sized room based on invite list. Expected outcome: size mismatch drops from 34% to under 15%.

Medium priority · 8 weeks

✓ Rebalance room capacity in Austin and Pune — convert underused large rooms into smaller huddle spaces — using this quarter's utilization data. Expected outcome: both offices close the 12–17 point utilization gap to the account average.

Visitor Management

High priority · 4 weeks

✓ Fix the SSO/calendar integration in Austin and London by realigning the identity-provider mapping. Expected outcome: host notifications fire in real time, cutting check-in time toward the 2-minute target.

High priority · 2 weeks

✓ Update London's data-retention settings to auto-purge visitor photos and ID scans per the GDPR window. Expected outcome: closes the compliance gap before the next audit cycle.

Medium priority · 8 weeks

✓ Roll out self-service kiosks in Pune and London, and drive pre-registration adoption through automated host reminders. Expected outcome: pre-registration rate climbs from 47% toward the 70%+ target.

i Decision Rationale: Fixing allocation and integration issues first restores core reliability and trust in the platform — before investing in any net-new features or expansion.

Next Quarter Plan

Execution roadmap, owners, and target KPIs for Q4 2026

Initiative	Owner	Timeline	Baseline	Target KPI
Auto-release no-show bookings	WorkInSync CS	Week 1–2	18% no-shows	< 8% no-shows
Smart room-size suggestions	WorkInSync Product	Week 3–6	34% mismatch	< 15% mismatch
Rebalance Austin/Pune capacity	WorkInSync CS	Week 3–8	49–54% util.	65%+ util.
Fix Austin/London integrations	WorkInSync Tech	Week 1–4	Sync failing	100% sync uptime
GDPR retention fix (London)	WorkInSync Compliance	Week 1–2	Retention gap open	Zero violations
Kiosk rollout (Pune, London)	WorkInSync Deployment	Week 4–8	6.5 min check-in	< 2 min check-in
Pre-registration push	Client + CSM	Ongoing	47% pre-reg	70%+ pre-reg

Goal for Next QBR: room utilization 75%+ account-wide, no-show rate under 8%, pre-registration above 70%, and 100% integration/compliance coverage across all 5 offices.
